NumPy

Numpy → Python Library → mathematical operations

↓

array → collection of elements

↓

contiguous memory

↓

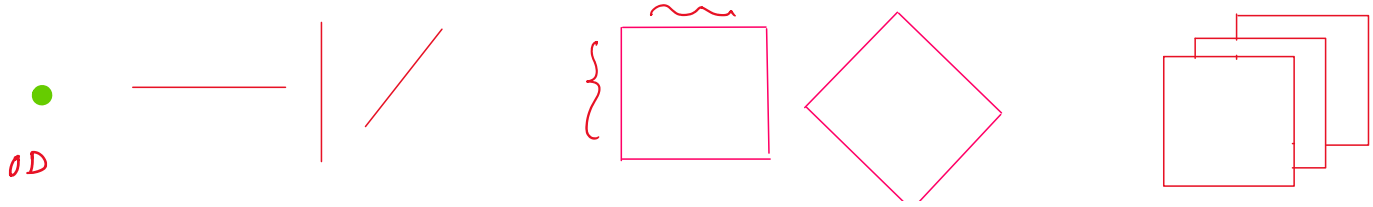

→ used by lists

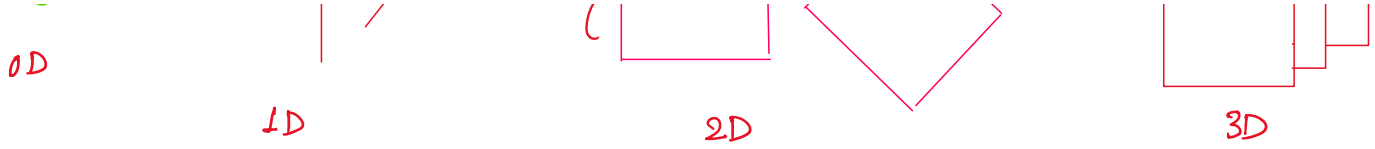

Numpy arrays are built using C language.

That's why they are fast

Arrays can be multi-dimensional

1. 1D Array: [2 4 5] ⇝ marks of student A
2. 2D Array: [[2 4 5]
   [6 7 3]] ⇝ marks of student A & B
3. 3D Array: [[[2 4 5]
   [6 7 3]]
   [[1 3 8]
   [6 7 4]]]
   ⇝ Marks of student A & B of section 1
   ⇝ marks of student A & B of section 2

Also, Numpy arrays consists of homogenous data.
